OVS NOTE 2024/52

26 November 2024

OUTBREAK OF BLUETONGUE VIRUS IN POLAND

Purpose

1. To inform you that, owing to an outbreak of bluetongue virus (serotype 3) in Poland, consignments of live ruminants and ruminant germplasm from Poland should be held.

Background

2. Poland reported an outbreak of BTV-3 on 22 November 2024: [Chief Veterinary Inspectorate](#). This occurred in a cattle holding in the Wołów district. As a result of this outbreak, Poland has lost its BTV-free status.
3. The UK Office for SPS Trade Assurance will update its [Live Ungulates](#) listing in due course to apply Supplementary Guarantee 'A' to the entry for Poland. This will require live ruminants to be vaccinated for all serotype/s of BTV circulating in the country. A separate OVS note will be issued when this has taken place.
4. In the meantime, any consignments of live ruminants and ruminant germplasm from Poland should be held, with the UK Office for SPS Trade Assurance contacted for advice at ukassurance@defra.gov.uk.
5. In addition to the above, the loss of Poland's BTV-free status means that exports of ruminant germplasm from Poland to GB will now also be required to comply with the relevant testing requirements for BTV set out in relevant health certificates.
6. We will keep you informed of any further developments.

Action for OVSs

7. To note the above information.
